DETAILED ACTION

Election/Restrictions

Claims 1-2 and 4-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/4/2006.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 3 and 6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claims 3 and 6, the limitations of "a left-right swiveling component of a roll gap of said rolling mill" was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. There is absolutely no disclosure of what constitutes the aforementioned swiveling component and thus one of ordinary skill in the art would not be able to make or use the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogawa et al (JP 06-262207). As best understood, Ogawa discloses a an apparatus and method containing all of the claimed elements including split backup rolls (3, 4) split into at least three segments in an axial direction (paragraph 0008 and 0009 of translation) and having a construction for supporting both a vertical load and a rolling direction load (see figures 1 and 3), each of the load measuring devices independently having a load measuring devices (16A, 16B, 17A and 17B), a coiling device (12). The calculation devices and calculating steps, as required by the claims, are read onto and accomplished by the controls discussed through the disclosure, for example in paragraph 0019. Furthermore, as best understood and lacking any clear distinguishing features the left-right swiveling component is read onto the screw down devices as they are arranged on the left and right side and swivel around in order to adjust to a desired pressure.
